SEMINAR: How Do We Supply the World's Energy Needs?
PRESENTER: Professor Derek Abbott, University of Adelaide

Professor Abbott's interests are in the area of complex systems and multidisciplinary applications of physics and engineering.

WHERE: 6.102
WHEN: 10:00AM, SEPTEMBER 27TH
RSVP: smart-facility@uow.edu.au

TOPIC:
Future energy supply is a major global problem. Although no one knows exactly when oil production will cease, its days are undoubtedly numbered and its environmental shortcomings well recognized. Any alternatives that involve extracting resources from the earth will be similarly unsustainable, at best only temporarily deferring the problem. So what is the answer?
