Information Systems Research Issues and Theoretical Foundations

CONNECT: SMART SEMINAR SERIES

Date: Monday 9th July 2012
Location: SMART room 6.105
Time: 9.30am
Presenter: A/Prof Rajeev Sharma

Abstract: This presentation will describe the key research issues that are examined in the Information Systems literature and the theoretical foundations that underpin the discipline. The presentation will identify the essential inter-disciplinary nature of IS research and, in particular, its links to social science disciplines such as psychology, sociology, organisational behaviour, economics and management. The presentation will outline key research programmes within SISAT, its inter-disciplinary collaborations and explore opportunities for inter-disciplinary collaborations with SMART.

Bio: Rajeev Sharma currently serves as Associate Professor in the School of Information Systems and Technology at the University of Wollongong. His research interests include the implementation of IS innovations, the management of IS projects and the strategic management of IS. His published research includes articles in MIS Quarterly, Information and Organization, Information Systems Journal, and Journal of Information Technology. Rajeev is serving as a Guest Editor of a Special Issue of the European Journal of Information Systems on ‘Transforming Decision-Making: The Next IS Frontier’. Rajeev also serves on the Editorial Boards of Journal of Information Technology and Journal of Strategic Information Systems. Rajeev’s has previously held faculty positions at University of Melbourne, University of Oklahoma and University of New South Wales. Rajeev is a graduate of the Australian Graduate School of Management, the Indian Institute of Management, Bangalore, and the University of Delhi.
